Single source shortest path, non-negative weights

Problem ID: shortestpath1
CPU Time limit: 3 seconds
Memory limit: 1024 MB
Difficulty: 3.8

Author: Per Austrin
Source: KTH CSC Popup 2005

Input

The input consists of several test cases. Each test case starts with a line with four non-negative integers, $1 \leq n \leq 10\,000$, $0 \leq m \leq 30\,000$, $1 \leq q \leq 100$ and $0 \leq s < n$, separated by single spaces, where n is the numbers of nodes in the graph, m the number of edges, q the number of queries and s the index of the starting node. Nodes are numbered from 0 to $n - 1$. Then follow m lines, each line consisting of three (space-separated) integers u, v and w indicating that there is an edge from u to v in the graph with weight $0 \leq w \leq 1000$. Then follow q lines of queries, each consisting of a single non-negative integer, asking for the minimum distance from node s to the node number given on the query line.

Input will be terminated by a line containing four zeros, this line should *not* be processed.

Output

For each query, output a single line containing the minimum distance from node s to the node specified in the query, or the word "`Impossible`" if there is no path from s to that node. For clarity, the sample output has a blank line between the output for different cases.

Sample Input 1

```
4 3 4 0
0 1 2
1 2 2
3 0 2
0
1
2
3
2 1 1 0
0 1 100
1
0 0 0 0
```

Sample Output 1

```
0
2
4
Impossible

100
```
